

Drops of Jupiter

Views of Jupiter are said to dominate the summer skies this season. Viewers who look southeast will see the bright white star blazing.

Ranch visitors can take a look every Saturday night from 9:00 to 11:00 p.m. with the Ranch's new 12-1/2 professional, state-of-the-art Meade telescope. This sophisticated instrument has a GPS satellite control that helps the user find over 150,000 objects in the sky. So whether you're looking for planets, star clusters, nebulae, or galaxies, you're sure to get an eyeful. The telescope is located outside of the Constellation Spa. Check in with the lobby Guest Services staff for more information.

For more exceptional stargazing opportunities, sign up for Skywatcher Alert at AOL Research & Learn for additional information and updates.
